> Data from Jobs in Australia and COE on the characteristics of labour hire/labour supply service workers are used to provide context to the overall Labour Account-based level estimates. While table 2 and 3 do include level estimates of these characteristics from Jobs in Australia and COE, these levels are included to enable further calculations.
> Additional socio-demographic and employment characteristics available in both sources are also included (e.g. occupation), to enable further analysis of each data source.

Table 2: Selected characteristics of people employed in Labour Supply Services, 2011-12 - 2022-23 (JIA/LEED)

People employed in Labour supply services by sex, age, occupation, earnings, status of employment, multiple job holder status, number of jobs held and number of concurrent jobs. Sourced from Jobs in Australia (LEED).
